

Why Connection?

We combine state-of-the-art facilities, trusted processes, and deep market insight to help organizations optimize their device lifecycle from deployment through disposition.

Most importantly, we understand timing, value, and risk. We deliver ITAD as a strategic service, not a transactional one.

Ask your Connection Account Team how IT Asset Disposition can help you recover value, reduce risk, and support your sustainability goals.

IT Asset Disposition Has Changed

Retired Assets Are Now Strategic Inventory

Today's IT environment is being reshaped by supply constraints, accelerated refresh cycles, and increased scrutiny around data security and sustainability. As a result, **IT Asset Disposition (ITAD)** is not just an after-thought for end-of-life cleanup, it has become a lever for value recovery, risk reduction, and operational efficiency.

Connection helps organizations recover value from retired assets, protect sensitive data, and meet ESG requirements with confidence, all while responding to today's market realities.

Why ITAD Matters Right Now

Reclaim Capital Locked in Memory-rich Infrastructure: Global demand for memory intensive infrastructure is driving scarcity and increasing the secondary-market value of assets rich in RAM and storage.

✓ Organizations that act quickly can **monetize retired devices at peak value** and offset new infrastructure spend.

Faster Refresh Cycles Demand Smarter Exits: AI readiness, cloud migration, and modern consumption models are accelerating hardware refresh cycles.

✓ More frequent turnover makes **secure, auditable, and value-optimized disposition essential** to controlling total cost of ownership.

ESG and Data Security Are Under the Microscope: Environmental reporting, chain-of-custody requirements, and data-privacy regulations continue to tighten.

✓ **Certified data destruction and transparent sustainability reporting** are now business requirements, not nice-to-haves.

IT Asset Disposition Services

Reduce Hassle, Cut Costs, and Recover Value Responsibly

Value Recovery and Monetization

- Refurbishment and resale through global secondary markets
- Parts harvesting and residual value optimization
- Market-timed recovery strategies to maximize return

Sustainability and ESG Alignment

- Zero-landfill recycling processes
- Responsible de-manufacturing and materials recovery
- Sustainability scorecards to support ESG reporting

Secure, Compliant Disposal

- On-site and off-site data destruction
- DoD-compliant multi-layer data wiping
- Certificates of Destruction and full audit documentation
- Compliance with GDPR, HIPAA, PCI, and industry standards

End-to-end Lifecycle Management

- Turnkey logistics and retrieval
- Asset reconciliation, serialization, and reporting
- Infrastructure decommissioning and employee return programs
- Chain of custody intake and tracking
